

Policy Announcement related to PRKG2 Gene Mutation for Dwarfism (D2)

On August 29, 2011, the Board of Directors adopted a formal policy to address the unique strain of dwarfism initially discovered in the PRKG2 gene in 2005. Specifically, this policy addresses a strain of dwarfism that the Association previously designated as D2. For a more complete history of this defect, see the article that appeared on it in the February 2008 Angus Journal. A DNA test, recognized and approved by the Association, has been in place since September 2007.
